PROFILE

"I am very excited about the field I am in, and I am passionate about writing elegant code. I have lots of experience in an Agile environment, working in a team as a developer and architecture engineer as well as handling projects independently. I write clean, robust code that's performant and maintainable and I enjoy optimisation problems."

EMPLOYMENT HISTORY

Employer: SwiftCom
Job Title: Junior Software Engineer
Period: 2019 – Current

Duties & Responsibilities

- At SwiftCom, He worked on developing headless eCommerce websites, building frontends in Gatsby.js and React using GraphQL as well as custom PHP plugins.
- Moreover, he oversaw exploring new technologies and tech stacks which consequently led to the adoption of a purely functional front-end language that improved development speed significantly and resulted in a remarkable reduction in runtime errors and bug-related tickets.
- Deploying to various CDN's like Netlify, Cloudflare and AWS.
- SEO and Site Optimisation to improve Page Speed Scores.
- Exposing as well as consuming REST API's.
- Implementing User Authentication, Authorisation and Roles.
- Writing serverless functions, NPM packages and various JS plugins.
- Since the start of 2021, He has also assumed leadership roles such as communicating with product owners and infrastructure architecture.

Employer: University of Pretoria
Job Title: Embedded Systems Developer
Period: 2020 (6 Months, Part-time)

Duties & Responsibilities

- For an industry client project, they built a system to monitor water sources in national parks across Southern Africa. He wrote embedded code for microcontrollers in the field, communicating using LoRaWAN and MQTT with data encryption, fault-tolerance and redundancy.
